SUMMARY:

Software developer and Software Engineering student, in the field since 2023, with **10+ systems in production for real clients** and enterprise apps at CMOC. My strength is **delivering complete systems**, from database to deployment, with Python, React, and SQL, focused on automation, testing (TDD), and business results.

PROFESSIONAL EXPERIENCE:

Software Engineering Intern – CMOC Mar 2025 – Present

- Built from scratch the 'Schedules and Adherence Management' system (Power Apps, Power Automate) for maintenance planning (PPCM), **centralizing 60–80 work orders per month** and eliminating manual logging.
- Built the 'Action Management' app (Power Apps, SharePoint, Power Automate), **centralizing ~600 monthly requests** that managers exchanged by email and Excel, with Kanban, an audit trail, and Teams approvals.
- Automated control reports and closing workflows with Python, Power Automate, and Excel/VBA, **saving hours of repetitive work every week** and reducing errors in data consolidation.
- Engineered CAPEX and budget dashboards in Power BI (DAX, Power Query) and a cross-department cost-center sync pipeline, **unifying the financial KPIs** used by leadership.

Freelance Full Stack Developer – Atual Estilo Barbershop | atualestilo.com Jan 2026 – Present

- Drove a **46% increase in the customer base** and **30+ automated daily bookings** since launching the online booking platform I built, reducing manual work and missed appointments.
- Developed the booking engine with atomic validation against double-booking and an admin panel (JWT, bulk time-slot blocking, recurring clients) using **React, PHP, and MySQL**, backed by **55 automated tests**.

Freelance Web Developer – Milena Reis Architecture | portifolio-milena.vercel.app Feb 2026 – Oct 2026

- Generated **8 closed clients in 3 months**, all sourced from the website, by building a high-impact portfolio (JavaScript, GSAP, Tailwind CSS) with a 3-step quote form that sends leads straight to WhatsApp.
- Built an admin panel with Vercel serverless functions and the GitHub API as a CMS, letting the architect **publish new projects without a developer**.

Freelance Full Stack Developer – Flow-Zap | github.com/SchaideNunes/FlowZap Sep 2026 – Present

- The owner of A&V Store checked every day who owed installments; built a system that **collects ~30 installments per month** with automated WhatsApp reminders, **eliminating the daily manual check**: he now just marks who paid.
- Structured the backend with TypeScript, Node.js, and **Supabase (PostgreSQL)** in Clean Architecture, with an anti-ban WhatsApp queue and a hybrid deployment (Vercel + in-store server), validated by **347 automated tests (TDD)**.

Freelance Full Stack Developer – Club Maravilha | club-maravilha.vercel.app Sep 2026 – Present

- Many of the club's **300+ members** fell behind on dues because they forgot to pay; built a platform with **automated WhatsApp billing** and **Pix payments reconciled in under 2 s** via webhooks, plus digital membership cards.
- Developed the API in **Python with FastAPI**, async SQLAlchemy, **PostgreSQL, and Docker**, using concurrency locks that **eliminate court double-bookings**, with automated tests (pytest, TDD).

TECHNICAL SKILLS:

Languages: Python | SQL | JavaScript | TypeScript | PHP

Back-end: FastAPI | REST APIs | JWT | SQLAlchemy | Clean Architecture

Front-end: React | Vite | Tailwind CSS | GSAP | HTML | CSS

Data, Testing & DevOps: PostgreSQL | Supabase | MySQL | MongoDB | TDD (pytest, Vitest) | Docker | Git | Vercel

Power Platform & Data: Power Apps | Power Automate | Power BI (DAX) | SharePoint | Excel/VBA

Spoken Languages: English: Advanced (C1) | Portuguese: Native

EDUCATION:

UNIASSELVI – Bachelor's in Software Engineering (4th semester) 2025 – 2028

Relevant Coursework: Data Structures, OOP, Software Engineering & Design, Web Systems, Databases.
